Career Objective

Fourth-year Information Technology student at PSG College of Technology with hands-on experience in building full-stack enterprise systems, cloud infrastructure automation, and machine learning pipelines. Proficient in **Java**, **Python**, **React**, and **AWS** services, with a track record of delivering production-grade software through real industry collaboration. Seeking a **Software Engineer** role where I can contribute to scalable backend systems and data-driven products.

Education

B.TECH Information Technology, PSG College of Technology	CGPA: 8.72	Aug 2023 – May 2027
HSC Raj Vidya Bhavan Matric Higher Secondary School	93.5%	Jun 2022 – Mar 2023

Experience

Software Intern | Cogentsoft Systems Private Limited 2024 – 2025

- Collaborated with a team to build a **Conversational Infrastructure Provisioning Agent** for AWS, enabling users to provision cloud resources through natural language using AWS Lex and Lambda functions.
- Used Terraform for infrastructure-as-code, Infracost CLI for real-time cost estimation, and Gemini API for AI-driven query interpretation.
- **Tech Stack:** Python, React, AWS Lex, AWS Lambda, Terraform, Infracost CLI, Gemini API

Projects

DevHub – Team API & Bug Management Platform

[GitHub](#)

- Built a full-stack developer productivity platform consolidating API documentation, live endpoint testing, Kanban bug tracking, and environment variable management into a single team workspace.
- Implemented JWT-based authentication with three-tier Role-Based Access Control (RBAC) and a backend proxy tester that forwards live HTTP requests with a full audit trail.
- **Tech Stack:** React, Spring Boot, PostgreSQL, JWT, Tailwind CSS, Supabase

AgriGear ERP – Agricultural Fleet Management System

[Live](#)

- Architected a multi-tenant enterprise ERP platform for machinery rental, supporting six distinct roles (Admin, Owner, Manager, Operator, Farmer, Mechanic) with isolated tenant environments.
- Implemented real-time machinery tracking with Leaflet maps, automated invoice and wage generation on job closure, and maintenance request workflows.
- Built KPI dashboards with ROI-per-machine analysis (Revenue vs. Expenses) using Recharts for business intelligence reporting.
- **Tech Stack:** React 19, FastAPI, MongoDB, JWT, Tailwind CSS, Leaflet

Credit Card Fraud Detector – End-to-End ML Pipeline

[GitHub](#)

- Built a fraud detection system on 1.85M transactions with a 191:1 class imbalance, engineering geospatial and temporal features (Haversine distance, transaction hour, customer age).
- Trained a Weighted Ensemble (XGBoost + LightGBM) achieving AUPRC of 0.9517 and Precision of 93%.
- Applied SHAP for per-transaction explainability and FP-Growth for mining behavioral fraud patterns; deployed as an interactive Streamlit dashboard with live transaction scoring.
- **Tech Stack:** Python, XGBoost, LightGBM, SHAP, SMOTE, FP-Growth, Streamlit, Plotly

Skills

- **Programming Languages:** Java, Python, JavaScript, C
- **Web Frameworks:** React, Spring Boot, FastAPI, Node.js
- **Cloud & DevOps:** AWS , Terraform, Infracost CLI
- **Database:** MySQL, PostgreSQL, MongoDB
- **Data Analysis:** Python, Pandas, Scikit-learn, Matplotlib
- **Tools:** Git, GitHub, Postman, Supabase
